

Abstract of the Invention

**TEMPORARY SURVEILLANCE SYSTEM**

5           A surveillance system is provided including a platform having a plurality and  
variety of cameras or sensors mounted thereto, and a base enclosure adapted to  
accommodate a power supply, a variety of electronics and other equipment for controlling  
and providing power to the surveillance equipment. The base is constructed to be tamper  
resistant and immovable by manual means. A substantially hollow support pole includes  
10 a lower portion detachably mounted to the base, and an upper portion mounted to the  
platform. Wires and cables for connecting the surveillance equipment with the  
electronics and power supply are run through the support pole. Power to the system may  
be supplied through existing power sources, for example a 120V power source.
